

Esker Showcases Best All-Around Document Delivery Solution for SAP Customers at 2006 ASUG Annual Conference and Sapphire '06

SAP document delivery experts feature end-to-end solution for automated processing of both inbound sales orders and outbound physical mail

Madison, WI and Orlando, FL, May 15, 2006 – Esker, the leading provider of business document delivery solutions, announced today its diamond-level participation at the 2006 Americas' SAP Users' Group (ASUG) Annual Conference, May 14-17 and Sapphire '06, May 16-18 at the Orange County Convention Center in Orlando, Florida. Esker will host a theater in its booth (#1848) where it will share live presentations of successful implementations of its leading document delivery solution that integrates seamlessly with SAP systems. By providing the ability to receive, capture and transmit documents directly from SAP solutions via email, fax and even physical mail, Esker DeliveryWare eliminates manual order entry and physical document handling, saving time, reducing costs and improving accuracy. The company will also present its technologies and customer-proven best practices for achieving new efficiencies through SAP document delivery automation in Theater 2 on Monday, May 15 from 12:00 – 12:30 p.m.

As an SAP Software Partner with certified integration, Esker provides hundreds of enterprises worldwide with advanced capabilities for automating business processes by delivering documents directly to and from SAP solutions. This track record of success has helped Esker DeliveryWare become widely recognized as the document delivery solution of choice among SAP customers.

By leveraging Esker DeliveryWare to achieve sales order process automation for SAP systems, inbound sales orders are recognized regardless of layout, and data is intelligently extracted and made available within SAP for further processing and retrieval. As a result, manual document processing is eliminated and the order-to-cash cycle is accelerated.

“There are still many instances where SAP users are forced to rekey data that comes in electronically into their organization - whether via fax, email attachment, or physical scans. They are too often being manually handled, stored, filed, and so on,” said Mike Wenzel, Vice President of Americas Sales for Esker. “Instead, we can help keep documents electronic, reduce errors and most importantly, speed up processing. Whatever the business process, if it's plagued with paper or manual labor, we can help an organization automate it from the moment documents come in to the moment that documents need to go out.”

As part of its end-to-end business process automation, Esker DeliveryWare offers an output option of physical mail processing, called Mail on Demand, by integrating with the Esker on Demand Center, a remote document delivery service that provides delivery via fax, email, SMS, and physical mail. With Mail on Demand, SAP customers can send business documents and letters via postal mail as easily as sending email. (more)

“Most organizations still have requirements to send physical business correspondence and whether it’s one letter or a mailing of 30,000 letters, sending it seamlessly from an SAP system to Mail on Demand for processing can offer huge time savings and efficiency gains,” said Wenzel. “It’s like having a private mail facility integrated directly to a customer’s SAP system.”

This is the sixth year Esker has participated in the conference for the world's largest independent, not-for-profit organization of SAP customer companies and partners in the world, further demonstrating the company’s long-standing commitment to this community. In addition, Esker joins Accenture and HP to sponsor ASUG’s Tuesday Night Event, a special evening of networking, having secured the entire Disney-MGM Studios for the 5,000 conference attendees’ exclusive use.

“We’re making a big splash because we really think that for most SAP customers, this will represent a new definition of what document delivery means - automation throughout the entire document lifecycle,” added Wenzel. “By achieving this, we feel we’ve built the best all-around solution for improving document-related business processes and we believe conference attendees are the people who will be among those most excited about its potential.”

About Esker

Esker is a recognized leader in helping organizations streamline manual, paper-intensive processes and reduce the use of paper by automating the flow of documents into, within and outside the organization. With patented document delivery automation software and hosted document delivery services, Esker offers a total solution to automate every phase and every type of business information exchange. Customers gain significant and immediate operational efficiencies, cost savings and measurable ROI in as little as three to six months. Founded in 1985, Esker operates globally and has over 80,000 customers and millions of licensed users worldwide. Esker has global headquarters in Lyon, France and U.S. headquarters in Madison, Wisconsin. For more information, visit www.esker.com or www.flydoc.com.
