

Esker Makes the Most of Fax Virtualization with Boardless Technology

Using Dialogic® Brooktrout® SR140 Fax Software, Esker FoIP solutions provide companies with cost savings opportunities, disaster recovery preparedness and “green” business operations

Madison, WI – September 11, 2009 – Esker, the leader in document process automation solutions, offers Fax over IP (Internet Protocol) solutions that allow users to fax documents over the Internet instead of using a fax machine or fax servers with fax boards, thus reducing the expense and inefficiency of traditional fax boards.

Esker fax server solutions can be seamlessly implemented in a virtual machine environment without hardware by integrating fax with Voice over IP Networks. Fax over IP (FoIP), when used with the boardless Dialogic® Brooktrout® SR140 platform, leverages VoIP architecture to fax-enable users and applications without requiring any fax boards.

By using fax virtualization with boardless technology, companies can:

- Significantly lower the cost of fax operations
- Cut expensive fax board and maintenance costs
- Complete large-scale consolidations in weeks rather than months
- Get new services and applications up and running quickly
- Implement a business continuity plan with no additional costs
- Reduce carbon footprint by moving from paper to digital workflows

“When coupled with the boardless Dialogic Brooktrout SR140 technology, Esker Fax thrives in the virtual environment because there are no hardware dependencies and the Esker Fax server solution can be enabled on every workstation with no additional costs to companies,” said Eric Bussy of Esker.

“With applications from Dialogic's partners, Dialogic Brooktrout Fax Products enable businesses to leverage their existing equipment to implement proven, tested Fax over IP servers in their IP networks,” said Rob Moran, product line director, Dialogic Brooktrout fax products at Dialogic.
