

Bryan Equipment Sales, Inc.

e2v technologies benefits from SAP Packaged Services incorporating Esker Fax software

For over 50 years, Bryan Equipment Sales, Inc. has distributed outdoor power equipment tools. Today, Bryan Equipment Sales is the number-one distributor of STIHL power tools in the United States. Prompt invoicing and acknowledgement of orders are essential to maintaining customer satisfaction. Bryan Equipment Sales chose Esker Fax for electronic delivery of these time-critical communications.

Challenge

Bryan Equipment Sales, a wholesale distributor of STIHL outdoor power equipment, has shipped over four million STIHL power tools since 1967. From its 125,000 square foot warehouse and office facility near Cincinnati, Ohio, Bryan Equipment serves approximately 1,300 full-servicing retailers across a six-state region consisting of Indiana, Kentucky, Michigan, Ohio, middle and western Tennessee, and West Virginia. The company's sales force is located primarily in the field, enabling closer relationships with customers but adding complexity to communications between field staff and the home office.

Most Bryan Equipment Sales retailers follow just-in-time inventory practices, placing orders as they receive them from their customers — sometimes daily. They prefer that the invoice be included with the shipment, and that an acknowledgement be sent when the goods are shipped. Managing the volume of phoned-in orders, shipping acknowledgements, and paper flow between staff and customers was a manual, paper-intensive process that became increasingly time-consuming and inefficient. The invoicing process alone involved several people, taking six to eight hours at the end of each week to print invoices, stuff envelopes, and send through U.S. mail.

Initially, Bryan Equipment Sales implemented a partial solution whereby salespersons would send individual or broadcast faxes from their laptops. "This eliminated some of the phone calls, but proved to be highly inefficient for the sales force," says Tom Mattei, Vice President of Operations at Bryan Equipment Sales. "A salesperson's laptop might be tied up for several hours trying and re-trying to send faxes to all the customers in their region." Mattei then turned to the web to research alternative solutions, and determined that Esker Fax would best meet Bryan Equipment's needs.

Technical requirements

Bryan Equipment Sales needed to transition from a people-intensive, once-a-week invoicing process to a once-nightly automated system. The company wanted to be able to pull customer profiles and billing information from its HP e3000 business system. Intelligent

inbound routing of faxes and the ability to deliver either fax or email, according to the user's preference, was essential. The system needed to be able to handle in excess of 600 automated faxes per night, with capacity to expand. Bryan Equipment Sales wanted an NT-based system that could be installed and managed by inhouse technicians, and the chosen solution would have to be compatible with the company's Merlin Legend digital phone system.

It used to take two or three days to get an order out during the busy season. Today, an order in by 4 p.m. is out the same day."

Tom Mattei ■ V.P. of Operations ■ Bryan Equipment Sales

Solution

Bryan Equipment Sales purchased Esker Fax to deliver invoices electronically to its customers, rather than by mail. Invoices are now processed nightly, with email or fax communications generated according to the customer's stated preference. The automated process results in customers receiving notice prior to actually receiving the goods — a practice enthusiastically welcomed by customers. Bryan Equipment Sales is now able to send order acknowledgements as soon as orders enter the system. An order that comes in by fax, voice-mail, or email now has an acknowledgement sent to the customer at the time the order is entered. Invoices are faxed to customers so that they have the invoice when they receive the shipment.

Bryan Equipment's field sales personnel are no longer burdened with lengthy fax sessions. They transmit customer orders to the home office, using Microsoft Outlook, through the Esker Fax Exchange Connector. The automated system picks up the file attachments and manages all faxes to the customer. About 600 documents per day, 60 percent of which are invoices, are delivered electronically through Esker Fax from Bryan Equipment Sales' HP e3000 host. The rest are order acknowledgements, end-of-month statements, and back-order reports.

“The systems we have in place now help us do a better job of processing the orders, tracking inventory, providing sales information to sales reps covering various territories, and providing information to dealers on a more timely basis. Flexibility to grow in the future was a key aspect of our choosing Esker Fax.”

Tom Mattei ■ V.P. of Operations ■ Bryan Equipment Sales

Benefits

While Bryan Equipment Sales considers the primary benefit of its Esker Fax system to be the improved customer service, the company has realised measurable economic benefits as well. It previously cost \$0.63 on average to print, handle, and mail an invoice. Using Esker Fax, it costs only \$0.06 for Bryan Equipment to fax invoices and order acknowledgements to its customers – and even less for email since there is no long-distance cost. Mattei originally estimated a three-year payback period on the investment in Esker Fax, but the payback came much faster than anticipated – after just one year.

Future

“The systems we have in place now help us do a better job of processing the orders, tracking inventory, providing sales information to sales reps covering various territories, and providing information to dealers on a more timely basis,” says Mattei. “Flexibility to grow in the future was a key aspect of our choosing Esker Fax.” Bryan Equipment Sales’ future plans include expanding to six ports and integrating Esker Fax with the direct inward dial (DID) capability of its digital phone system, enabling the company to route communications directly to individual desktops.
